Tips for connections via FreeConferenceCall.com:

- Download the latest version of their mobile app. There is built in call routing technology to help avoid phone carriers that are experiencing high congestion. In the app you can also choose to call in using Wi-Fi. We suggest trying this if you previously called in and received a busy signal
- Schedule meetings 5, 15, 45, or 50 minutes past the hour. As an example, try scheduling your meeting to start at 9:50 instead of 10:00. This is because demand surges on the hour and the half hour and your phone carriers' network will be most strained at those times.
- If you call in and receive a busy signal send a text that says "Help" to your conferences dial-in number. Support personnel will then send you backup numbers that you can use.
- If you have AT&T, tweet them @ATT and tell them they need to stop blocking calls to [FreeConferenceCall.com](https://www.freeconferencecall.com).
